

Interactions in my Apple products webpage:

<https://products.dynamic-content-design.upasanamukherjee.ca/>

The Carousel:

There are **arrows left and right of the screen**. These arrows changes the screen to display different products on click. **The right arrow takes the products in ascending order and the left arrow in descending order.**

The Show More Button:

There is a show more button at the bottom of each of the product. **This button when clicked displays a section on the right side of the page which has a brief detail of the product and also shows the accordion option.**

The Accordion:

With the Show More button clicked and the details section visible, there is an **Accordion button named: Show Specs and price**. On clicking **“Show Specs and Price”** the accordion expands showing the details of the product. It is worthy of note here that within this function, there are two more events that takes place.

The accordion on its initial appearance, displays “Show Specs and Price” but once expanded the button changes text to “Hide Specs and Price”.

The Changemode:

There are two buttons on top right corner of the screen. The **sun** indicates day mode and the **moon** indicates night mode. The initial mode of the screen is night mode when the background is black while the contrasting colors are white. Whereas the day button does the opposite, it changes the background to white and foreground to black.

The Zoom:

This function enables in scaling the image to bigger size on mouse in and it changes back to its original size on mouse out. **It only does so after show more button is clicked** and the page displays the details of the product.
